

Odoo Installation Process

The simplest and easiest way to install Odoo is by using Docker.

Step 1: Install Docker Desktop in your windows

- Open Chrome Type [[Docker Desktop for Windows](#)] in the search bar
- Click on the first link Scroll down

- Click on the [Docker Desktop for windows -x86_64](#)

- Once Docker desktop installer is downloaded
- Click on it and install it on your computer.
- Once installed open it and login with your google account
- Just make sure you keep it open the whole time no need to do anything else on docker

Step 2: Odoo installation

- Create a [folder name odoo](#) in your computer
- Inside the Odoo folder [create a file docker-compose.yml](#)
- Paste this code in [docker-compose.yml](#) and save it.

version: '3.1'

services:

web:

image: odoo:17

depends_on:

- db

ports:

- "8069:8069"

environment:

- HOST=db

- USER=odoo

- PASSWORD=odoo

volumes:

- odoo-web-data:/var/lib/odoo

db:

image: postgres:15

environment:

- POSTGRES_DB=postgres

- POSTGRES_PASSWORD=odoo

- POSTGRES_USER=odoo

volumes:

- odoo-db-data:/var/lib/postgresql/data

volumes:

odoo-web-data:

odoo-db-data

- Now open the [terminal \(Command Prompt\)](#) in the Odoo folder.
- Type this command in the terminal [docker compose up](#). It can take some time to complete it.
- Once the installation is completed. Open <http://localhost:8069> in the browser.
- You will see a database creation page. Enter the following entries

Example:

- Database Name: odoo_db
 - Email: your email
 - Password: your password
 - If you want dummy data tick the check box
-
- Install the modules required for your project once you are in the ERP system.
 - To close the Odoo type [docker compose down](#) in the terminal.

Thank you and enjoy
